Rokiah Alavi : Industrialization in Malaysia: Import Substitution and Infant Industry Performance (Routledge Studies in the Growth Economies of Asia) before purchasing it in order to gage whether or not it would be worth my time, and all praised Industrialization in Malaysia: Import Substitution and Infant Industry Performance

(Routledge Studies in the Growth Economies of Asia):

Some of the most successful growth economies in the Pacific Rim have combined protectionist Import Substitution Industrialisation policies with export-oriented policies. This study provides a systematic rethinking of relationships between strategies within the Malaysian context.

"This book is a competent, carefully researched, clearly written exercise in mainline economic analysis." - "Journal of Asian Studies From the Back Cover Did the 'infant industries' of the 1960s ever grow up? Is the scepticism surrounding import-substitution (IS) strategies justified? Import-substitution strategy enjoyed its heyday in the 1970s but has been largely discredited and replaced by free-market policies in the 1980s. However, it has been recently acknowledged that some of the most successful growth economies in the Pacific Rim combined protectionist import-substituting industry (ISI) policies with export-orientated policies. A systematic rethinking of the relationship between import substituting and export-orientated industrialisation strategies is provided by this study using direct price comparisons to estimate the effective rate of protection (ERP), an examination of the dynamic performance of infant industries using total factor productivity growth (TFPG) and domestic resource cost (DRC), and a comparison of the experience with the case of South Korea.
