**Riccardo Crescenzi, Andrés Rodríguez-Pose : Innovation and Regional Growth in the European Union (Advances in Spatial Science)** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Innovation and Regional Growth in the European Union (Advances in Spatial Science):

This book investigates the EU's regional growth dynamics and, in particular, the reasons why peripheral and socio-economically disadvantaged areas have persistently failed to catch up with the rest of the Union. It shows that the capability of the knowledge-based growth model to deliver its expected benefits to these areas crucially depends on tackling a specific set of socio-institutional factors which prevents innovation from being effectively translated into economic growth. The book takes an eclectic approach to the territorial genesis of innovation and regional growth by combining different theoretical strands into one model of empirical analysis covering the whole EU-25. An in-depth comparative analysis with the United States is also included, providing significant insights into the distinctive features of the European process of innovation and its territorial determinants. The evidence produced in the book is extensively applied to the analysis of EU development policies.

From the reviews: "This book presents a collection of empirical studies on the determinants of regional growth in the European Union. ... The book is interesting, informative, clear and well organized. There are plenty of cross-references among the various chapters, which make it always easy to follow the main narrative line and proposed arguments. ... The theoretical framework adopted in the book is broad and encompassing. ... The empirical results are interesting." (Fulvio Castellacci, *Regional Studies*, Vol. 46 (8), September, 2012)

From the Back Cover This book investigates the EU's regional growth dynamics and, in particular, the reasons why peripheral and socio-economically disadvantaged areas have persistently failed to catch up with the rest of the Union. It shows that the capability of the knowledge-based growth model to deliver its expected benefits to these areas crucially depends on tackling a specific set of socio-institutional factors which prevents innovation from being effectively translated into economic growth. The book takes an eclectic approach to the territorial genesis of innovation and regional growth by combining different theoretical strands into one model of empirical analysis covering the whole EU-25. An in-depth comparative analysis with the United States is also included, providing significant insights into the distinctive features of the European process of innovation and its territorial determinants. The evidence produced in the book is extensively applied to the analysis of EU development policies.
