(Economic theory and mathematical economics):

International Economics and Development: Essays in Honor of Raúl Prebisch provides information pertinent to the developments in the field of international economics as it relates to the problems of the underdeveloped countries. This book provides a brief biography of Professor Raúl Prebisch and his many contributions to international economics. Organized into eight parts encompassing 22 chapters, this book begins with an overview of the influence of Prebisch on Latin American international development policy. This text then examines the problem that has always been of real concern to the U.N. since the creation of the organization, namely, the social and economic development of underdeveloped countries. Other chapters consider the problem of economic development of the countries newly involved in the process of growth. This book discusses as well the relationship between stability conditions of real and monetary models of international trade. The final chapter deals with the characteristics of underdevelopment. This book is a valuable resource for economists.
