**Hung-Gay Fung, Tse Yiuman : International Financial Markets;: 13 (Frontiers of Economics and Globalization)** before purchasing it in order to gage whether or not it would be worth my time, and all praised International Financial Markets;: 13 (Frontiers of Economics and Globalization):

This volume contributes to a fresh perspective on the economic and finance research on international financial markets

and also the commodity markets by examining various factors that affect information transmission and pricing relation in the spot and derivatives markets in the United States and internationally.

This work for scholars, policy makers, and practitioners in financial economics examines international financial markets and commodity markets. It considers the effects of changes in global economies, technologies, and governmental actions on trading, and conversely also explores the implications of global trading on the growth and development of domestic and international markets. Several chapters offer a focus on China, looking at the 'dim sum' bond market and the role of Chinese futures in the world commodity futures markets. Some other subjects examined are sovereign credit default swaps, carbon emissions trading, and changes in global financial markets in the wake of the 2008 financial crisis. The editors are affiliated with the University of Missouri. There is no subject index. Distributed in North America by Turpin Distribution. --Book News Inc.
