In this book, the author draws from finance, psychology, economics, and other disciplines in business and the social sciences, recognising that personal finance and investments are subjects of study in their own right rather than merely branches of another discipline. Considerable attention is given to topics which are either ignored or given very little attention in other texts. These include: the psychology of investment decision-making, stock market bubbles and crashes, property investment, the use of derivatives in investment management, regulation of investments, business. More

traditional subject areas are also thoroughly covered, including: investment analysis portfolio management capital market theory market efficiency international investing bond markets institutional investments option pricing macroeconomics the interpretation of company accounts.
