Timothy M Devinney, torben Pedersen, Laszlo Tihanyi : Philosophy of Science and Meta-Knowledge in International Business and Management: 26 (Advances in International Management) before purchasing it in order to gage whether or not it would be worth my time, and all praised Philosophy of Science and Meta-Knowledge

in International Business and Management: 26 (Advances in International Management):

This volume explores major issues and concepts in the field of international business and management and asks the question "What is it that we know?" It examines key topics such as multinational enterprise and strategic management theory, post-merger integration, internalizing firms and the strategy-performance relationship.

For this 26th volume of the "Advances in International Management" series, Devinney (U. of Technology, Sydney, Australia), Pedersen (Copenhagen Business School, Denmark), and Tihanyi (Texas AM U., US) have guided their selection of the various empirical and theoretical studies in international management according to the theme of application of the philosophy of science to the field, with the issue of meta-knowledge in research being a key element of that overarching theme. Opening papers address the career contributions of Jean Francois Hennart to the theory of the multinational enterprise (including a self-review by Hennart himself). The remaining papers address such topics as: the advantages of baseline modeling of null-hypothesis testing in international business research, meta-analytic research in international business and international management, sources and modes of theorizing on the international strategy-performance relationship, and international technology transfer and its implications to dominant design theory. Distributed in North America by Turpin Distribution. --Book News Inc. Portland, OR
