The classic source for the technical analysis discipline now brings readers up to date in techniques and technology. Now, in this second edition of the classic text, expert Thomas Dorsey shows, step-by-step, how to create, maintain, and interpret your own point and figure charts. He explains how you can use your findings to track and forecast market prices and develop an overall investment strategy. Perhaps most importantly, he helps you develop confidence in the market and take decisive action at the appropriate time, rather than reacting after the fact. Dorsey also highlights new developments in the field and incorporates the use of recently developed software to track any market using point and figure methods. Written for both new and experienced P F chartists, this updated edition of a technical analysis classic brings point and figure charting into the Internet age. Thomas J. Dorsey (Richmond, VA) is President of Dorsey, Wright Associates, a registered investment advisory firm that uses point and figure charting as its main source of technical analysis.
