Eric Alagan : Property Valuation: Secrets of the Roman Decision Model (Micro Mouse Business) before purchasing it in order to gage whether or not it would be worth my time, and all praised Property Valuation: Secrets of the Roman Decision Model (Micro Mouse Business):

0 of 0 people found the following review helpful. Don't waste your moneyBy cheeHad i followed his advice, will probably not buy anything and miss out on numerous opportunities.Keep things simple, be focus.

Ignore "affordability" and focus on "fair value"; why pay a \$1 million just because one can "afford" it when the property is worth only \$750,000.00? Helps you value property consistently and objectively using five critical parameters: 1. Return on Investment — how much money you ought to receive for the money you pump in as deposits and top-up — factors in mortgage rate changes 2. Value your property based on market size — how many buyers/sellers are competing with you — translated into rental returns — including periodic rental increases 3. Calculate the full income/benefits of your property based on tenure — the longer the tenure, the more overall income — but how long a tenure (hint — not the 99 years) 4. Factor in your risk appetite — which changes with time — from marriage, with children, empty nest/retirement 5. Finally, don't forget the time value of money — a dollar today is worth less in 10 or even 5 years hence — determine this now, today before you sign on the dotted line. The handbook also helps you to empirically factor in and trade off subjective elements such as (for example): home near office vs. near shopping, transport and other amenities; proximity to schools vs. grandparents; good facing/feng shui vs. price; and other attributes that you prefer. A must-read book before committing to buy/sell/hold property worth hundreds of thousands and even millions of dollars.
