Tony Porter : Technology, Governance and Political Conflict in International Industries (Routledge Advances in International Political Economy) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Technology, Governance and Political Conflict in International Industries (Routledge Advances in

International Political Economy):

This book makes an important theoretical contribution to our understanding of international institutions by exploring conceptually and empirically the impact of technology on the governance of international economic activities. *Technology, Governance and Political Conflict in International Industries* addresses the current intense interest among scholars in the ways that knowledge can shape the development of international institutions by examining a particularly important type of knowledge - technology. In doing so the book makes a novel contribution to the 'constructivist' approaches that have become popular in the study of International Relations. Moreover, Porter's innovative approach treats the international economy not as a novel and constantly expanding highly competitive market composed of individual firms, but rather as a highly institutionalized set of industries, often dominated by leading firms, in which remarkable centuries-long patterns of continuity and repetition can be identified.

Tony Porter's book makes a unique and valuable contribution to the study of international political economy and international relations theory. . . . Perspectives on Politics, December 2003
About the Author
Tony Porter is an Associate Professor of Political Science at McMaster University, Hamilton, Canada. He is the author of *States, Markets and Regimes in Global Finance* and co-editor, with A. Claire Cutler and Virginia Haufler of *Private Authority in International Affairs*.
