This particular one, is more focused on

the "Enterprise B" skills, and gives great insights into how to bring strategic thinking into the planning for projects, and portfolios. Business Analysis is largely focused on bringing together the business people with the technology people, so they can work from a common understanding of what needs to be accomplished to get the desired outcomes. This book does a great job at getting at the beginning of that and adds value to both the business person, and the technology delivery team. It is a must read for the CIO level, and key IT executives, and managers, as well as for the practicing BA, and all related professions. I highly recommend this excellent book. 0 of 0 people found the following review helpful. Five Stars By accent3@hotmail.com I loved it and my husband as well.
