HongI have read this book from my colleague. really good one for giving advices for people seeking jobs in academic.0 of 0 people found the following review helpful. Must read for graduate students and postdocs in biology (especially ecology)By ChelseThese authors do a wonderful job at discussing some of the often tabooed topics in the job search. It was very thought-provoking, and will alter some of the things that I've been doing along my search. I'm going to recommend to many others.5 of 5 people found the following review helpful. Most info found on free forums, not for Ph.D. plus levelBy H. SapiensI am going to buck the trend here and say that this book would be good for graduate students but certainly not postdocs and beyond. There are a couple reasons why:1) information on graduate program selection (cursory, not in depth)2) assumes you have no idea what the basic elements of an application are (e.g. teaching statement)3) assumes you have no idea how to behave yourself appropriately in public (what, I shouldn't drink 3 alcoholic beverages during my interview?)What I was looking for:1) more in depth discussion of what goes on in a search from the committee's perspective2) what elements are most important in a research/teaching statement and caveats (SLAC v. R1)3) assistance in fine-tuning for particular institutions4) Discussion on determining appropriate start-up funds and negotiating the packageWhat I got:very general information widely available at many other sites - I read it front to back and learned nothing new. There are very few examples and no in depth examination of what worked in them and did not work like the Chronicle of Higher Education's C.V. Doctor does.Lip service to negotiating - your major professor may give bad advice if he/she is at R1 and you are headed to SLAC, if you're a chick, better toughen up! The gist of the advice: ask around.What I recommend:a subscription to the Chronicle of Higher Education or an in depth reading of their forums (free)For the price, it may be worth having for the basic information combined. I do not regret the purchase, as I will keep it as a reference for students.

The Chicago Guide to Landing a Job in Academic Biology is an indispensable guide for graduate students and postdocs as they enter that domain red in tooth and claw: the job market.

"I think this book will help a lot of people. It is amazingly comprehensive. The authors don't assume a one-size-fits-all approach, but instead make the reader think hard about what will be the best fit for each situation, by raising the issues they raise and by discussing real-life concerns." - Lynda Delph, associate chair, Department of Biology, Indiana University>About the AuthorC. Ray Chandler is professor of biology at Georgia Southern University. Lorne M. Wolfe is professor of biology at Georgia Southern University. Daniel E. L. Promislow is professor of genetics at the University of Georgia.
