**Victor A. Bloomfield, Esam E. El-Fakahany : The Chicago Guide to Your Career in Science: A Toolkit for Students and Postdocs (Chicago Guides to Academic Life)** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Chicago Guide to Your Career in Science: A Toolkit for Students and Postdocs (Chicago Guides to Academic Life):

0 of 0 people found the following review helpful. An excellent science career guidance book for scientists at all

levels  
By Mark Williams  
This is an excellent career guidance book for anyone considering a career in science. It discusses every stage of a scientist's career, starting with the undergraduate experience, how to prepare for graduate school, how to apply for graduate school, and continues with important advice at each stage, all the way to applying for industry or faculty positions after receiving an advanced degree. I give a copy to all of the researchers in my lab.

By Nathaniel H.  
After having this particular book recommended by this one group that I am a part of, I must say that the Five Star rating that I am giving here is the way to go. This book stressed the importance of being a person whom seeks to have their work published, what to expect in the Field of Science, and lots of tips for furthering into graduate studies. I really enjoyed this book and must recommend it to any student who wishes to know more about what to expect in our academic career.....

By Eduardo Bessa  
Even though the book is a little displaced for Latin American scientists, whose scientific institutions do not work quite the same as in the US, the book is a great source of guidance for junior professors (like myself), and graduate students.

Embarking upon research as a graduate student or postdoc can be exciting and enriching—the start of a rewarding career. But the world of scientific research is also a competitive one, with grants and good jobs increasingly hard to find. The Chicago Guide to Your Career in Science is intended to help scientists not just cope but excel at this critical phase in their careers. Victor A. Bloomfield and Esam E. El-Fakahany, both well-known scientists with extensive experience as teachers, mentors, and administrators, have combined their knowledge to create a guidebook that addresses all of the challenges that today's scientists-in-training face. They begin by considering the early stages of a career in science: deciding whether or not to pursue a PhD, choosing advisors and mentors, and learning how to teach effectively. Bloomfield and El-Fakahany then explore the skills essential to conducting and presenting research. The Chicago Guide to Your Career in Science offers detailed advice on how to pursue research ethically, manage time, and communicate effectively, especially at academic conferences and with students and peers. Bloomfield and El-Fakahany write in accessible, straightforward language and include a synopsis of key points at the end of each chapter, so that readers can dip into relevant sections with ease. From students prepping for the GRE to postdocs developing professional contacts to faculty advisors and managers of corporate labs, scientists at every level will find The Chicago Guide to Your Career in Science an unparalleled resource.

“The Chicago Guide to Your Career in Science is a roadmap to the beginning stages of a scientific career. I will encourage my own students to purchase it.”
